

# Iowa Influenza Surveillance Network (IISN)

# Influenza-like Illness (ILI) and Other Respiratory Viruses

## **Weekly Activity Report**

# For the week ending December 24, 2016 - Week 51

All data presented in this report are provisional and may change as additional reports are received

| Quick Stats  |                             |
|--|-----------------------------|
| Percent of outpatient visits for ILI <sup>1</sup>  | 0.88% (baseline 1.8%)       |
| Percent of influenza rapid test positive   | 7.95% (49/616)              |
| Percent of RSV rapid tests positive  | 17.21% (21/122)             |
| Percent school absence due to illness <sup>2</sup>   | 2.19%                       |
| Number of schools with ≥10% absence due to illness   | 3                           |
| Influenza-associated hospitalizations <sup>3</sup>   | 13/5580 inpatients surveyed |
| Influenza-associated mortality -all ages (Cumulative) <sup>4</sup>   | 2                           |
| Influenza-associated pediatric mortality (Cumulative)  | 0                           |
| <sup>1</sup> ILI: Influenza-like Illness is defined as a fever of ≥100° F as well as cough and/or sore throat. |                             |

#### Iowa statewide activity summary:

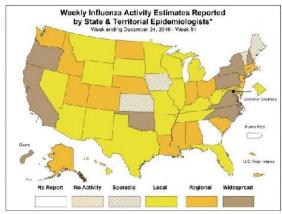

Influenza activity in Iowa is increasing. The geographic spread of influenza in Iowa is sporadic. For this reporting week, the State Hygienic Laboratory confirmed 12 influenza A(H3), one influenza A(H1pdm09), 12 influenza A(subtype pending), one influenza B(Victoria Lineage), two influenza B(Yamagata Lineage) and three influenza B(lineage pending) viruses from submitted samples. 13 influenza-related hospitalizations were reported from sentinel hospitals during this reporting week. The proportion of outpatient visits due to influenza-like illness (ILI) was 0.88 percent, which is below the regional baseline. In this reporting week, 11 adenovirus, eight parainfluenza virus type 2, 11 parainfluenza virus type 3, 37 rhinovirus/ enterovirus, 14 RSV, three hMPV and 25 Coronavirus were detected from surveillance sites.

#### National activity summary - (CDC)-Last Updated in Week 51:

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet 2016-17 Influenza Season Week 51 ending Dec 24, 2016

This map indicates geographic spread & does not measure the severity of influenza activity

Synopsis: During week 51 (December 18-December 24, 2016), influenza activity increased in the United States.

Viral Surveillance: The most frequently identified influenza virus type reported by public health laboratories during week 51 was influenza A (H3). The percentage of respiratory specimens testing positive for influenza in clinical laboratories increased.

Pneumonia and Influenza Mortality: The proportion of deaths attributed to pneumonia and influenza (P&I) was below the systemspecific epidemic threshold in the National Center for Health Statistics (NCHS) Mortality Surveillance System.

Influenza-associated Pediatric Deaths: No influenza-associated pediatric deaths were reported.

Outpatient Illness Surveillance: The proportion of outpatient visits for influenza-like illness (ILI) was 2.9 percent, which is above the national baseline of 2.2 percent. Nine regions reported ILI at or above their region-specific levels. Four states, New York City and Puerto Rico experienced high ILI activity; five states experienced moderate ILI activity; seven states experienced low ILI activity; 34 states experienced minimal ILI activity and the District of Columbia had insufficient data.

Geographic Spread of Influenza: The geographic spread of influenza in Guam and eight states was reported as widespread; the U.S. Virgin Islands and 17 states were reported as regional; the District of Columbia and 19 states reported local activity; five states reported sporadic activity; and Puerto Rico and one state did not report.

Detailed information can be found online at www.cdc.gov/flu/weekly/.

Percent school absence due to illness are reported through a weekly survey of lowa sentinel schools Hospitalizations due to influenza are voluntarily reported through a weekly survey of lowa sentinel hospitals

Deaths in which influenza is listed on the death certificate. This is an underestimate of influenza-related deaths Cumulative is 10/2/2016-current week

# **International activity summary - (WHO):**

Influenza activity in the temperate zone of the northern hemisphere increased slightly, with some countries passing their seasonal threshold, which is early for the season. The predominant strain of influenza worldwide is influenza A(H3). Detailed information can be found online at www.who.int/influenza/surveillance monitoring/updates/latest update GIP surveillance/en/. It was last updated 12/26/2016.

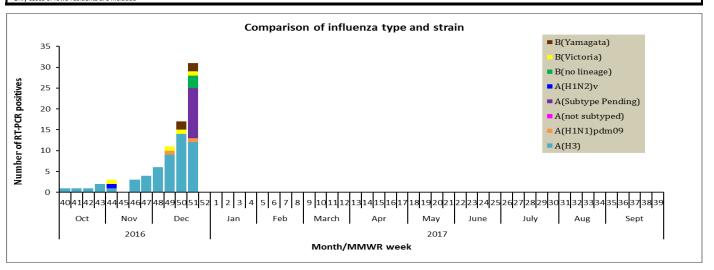

# Laboratory surveillance program:

The State Hygienic Laboratory (SHL) is the primary lab for influenza testing and reporting in Iowa. SHL reports the number of tests performed and the type and sub-type of positive tests to the influenza surveillance network several times every week. In addition, SHL surveys clinical and reference labs on a weekly basis for the number of rapid-antigen tests performed, the number positive and the positive non-influenza virus tests. This report also includes the positive non-influenza virus tests reported from the Dunes Medical Laboratories at Mercy Medical Center in Sioux City.

| Table 1: Ir  | able 1: Influenza A viruses detected by SHL by age group |        |          |                    |                 |                                     |         |          |                    |                 |

\*Counts of three or less are sometimes suppressed to protect confidentiality. Note that counts may not add up to the total due to missing age information Only cases of lowa residents are included "Not subtyped" column is due to weak detections. This can be due to poor collection, timing of collection or stage of infection.

# Rapid influenza and RSV test surveillance:

The State Hygienic Laboratory (SHL) runs a weekly web-based survey program where laboratorians report the number of influenza and respiratory syncytial virus (RSV) rapid tests performed and the number of tests positive. This table includes only the number of patients tested for influenza or RSV at laboratory surveillance sites throughout the state. This table does not provide case counts.

| REGION*            | RAPID ANTIGEN INFLUENZA TESTS |       |       |            | RAPID ANTIGEN RSV TESTS |          |            |  |

## Non-influenza respiratory viruses:

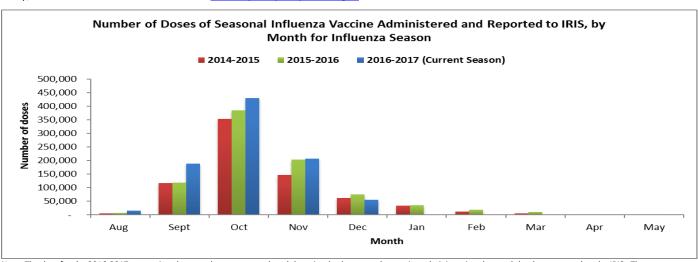

The State Hygienic Laboratory (SHL) runs a weekly web-based survey program where laboratorians report the number of positive tests for non-influenza respiratory viruses. This table also includes the positive non-influenza virus tests reported from the Dunes Medical Laboratories at Mercy Medical Center in Sioux City. The table includes only the number of positive tests at laboratory surveillance sites throughout the state. The table does not provide case counts.

| Table 4: Number of positive results for non-influenza respiratory virus collected by SHL, Mercy Dunes in Sioux City and Iowa Methodist Medical Center |              |                                     |  |  |  |  |

| Coronavirus   | 25           | 80                                  |  |  |  |  |
| Total   | 109          | 1058                                |  |  |  |  |

#### Seasonal influenza vaccination:

Seasonal influenza vaccination data in Iowa is based on doses reported to the Iowa Immunization Registry Information System (IRIS). IRIS is a confidential, computerized, population-based system that tracks immunization for children, adolescents and adults who are seen in a variety of public and private healthcare provider sites throughout the state of Iowa. For more information on the immunization data, contact Kim Tichy, IRIS coordinator at 515-281-4288 or <a href="mailto:kimberly.tichy@idph.iowa.gov">kimberly.tichy@idph.iowa.gov</a>.

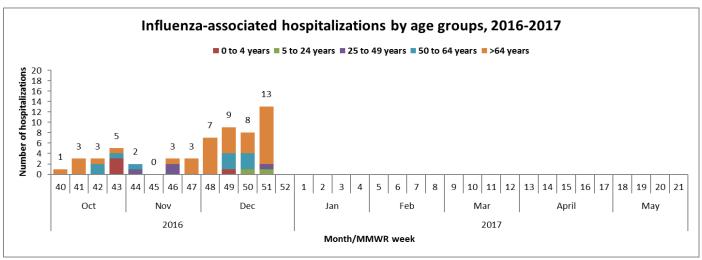

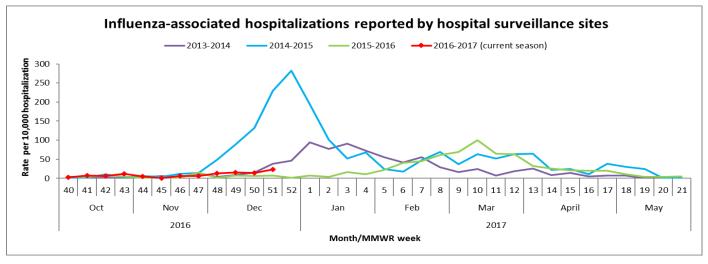

Note: The data for the 2016-2017 season is only up to the current week and there is a lag between the vaccine administration date and the date reported to the IRIS. The current season's data will be adjusted as additional data is received.

# **Influenza-associated hospitalizations:**

Sentinel hospitals that participate in IISN voluntarily track and report the number of influenza-associated hospitalizations and the total number of inpatients each week. Of the 126 hospitals across the state of lowa, 27 sentinel hospitals participate in weekly surveillance of influenza-associated hospitalizations for the IISN. Iowa hospitals interested in joining this surveillance program should contact Scott Seltrecht at 515-281-4985 or <a href="mailto:scott-seltrecht@idph.iowa.gov">Scott.Seltrecht@idph.iowa.gov</a> for more information.

| Table 5: Number of influenza-associated hospitalization reported by age group |              |                                     |  |  |  |  |

## Outpatient health care provider surveillance program (ILINet):

Outpatient health care providers who participate in the ILINet (a national influenza surveillance program) report the number of patients seen with influenza-like illness and the total number of patient visits each week. This system is a key part of lowa's influenza surveillance. Across the state, 17 providers, ranging from family medicine to student health centers, participate weekly in the ILINet program. Iowa health care providers interested in joining this surveillance program should contact Scott Seltrecht at 515-281-4985 or <a href="Scott.Seltrecht@idph.iowa.gov">Scott.Seltrecht@idph.iowa.gov</a> for more information.

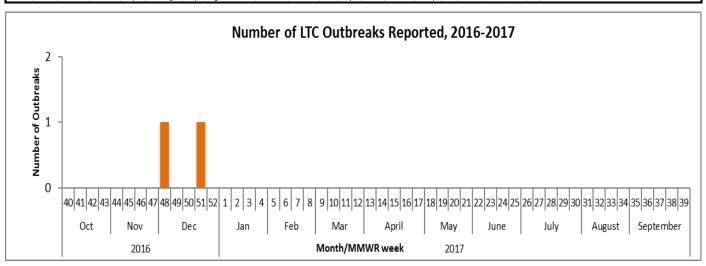

| Table 6: Outpatient visits for influenza-like illness (ILI) |      |           |         |          |           |           |         |

## 10 percent school absenteeism:

Schools (K-12) track and report outbreaks of influenza-like illness when the number of students absent with illness reaches or exceeds 10 percent of total student enrollment. Regional map with schools that have ≥10% absence due to illness for this current reporting week is displayed below (region numbers in black, number of reporting schools by county in red).

## School surveillance program:

Sentinel schools that participate in IISN voluntarily track and report absence due to all illness (including non-influenza illnesses) and the total enrollment each week.
